

FA21 Strategy Properties Settings

Update: Week Ending December 2, 2011

Displayed below are the current FA21 Strategy Properties settings.

NOTE: Default settings displayed in FA21 when you download FA21 from the website are different from these settings. Users are required to make the appropriate updates.

These settings (except for the user defined Trade Amount in Lots, FXCM provided Account To Trade On, and PAMM settings) resulted in the audited trade results displayed on the company website. Historical wins or losses do not suggest future results.

Margin Settings

Users are responsible to update settings to meet their respective trading strategy and account types' margin requirements. Users are responsible to determine the Margin Requirements for their currency pair. For example, the EUR/USD \$1k margin requirement as determined by FXCM is currently \$32/\$1k base unit. This is subject to change, so always verify with FXCM.

Trade Amount in Lots and PAMM(Percentage Allocation Money Manager)

Trade Amount in Lots:

Users are responsible to set the Trade Amount in Lots and PAMM settings to meet each person's trading strategy and risk level. Forex Associates suggest that new users of FA21 should set their Trade Amount in Lots to '1'. If the account is enable for \$1k base units, and the user is trading EUR/USD pair, the current margin requirement as determined by FXCM is \$32/\$1k which will result in a \$.10 per PIP net change. Margin requirements are subject to change without notice.

PAMM Settings:

If the user wishes to use PAMM with the EUR/USD pair: Set PAMM Enabled: YES. **NOTE: This 'YES' setting will disable the Trade Amount in Lots function.** Set the Margin Requirement per \$1k: \$32 (EUR/USD); Set PAMM%: 10.

By example, if the user has a \$2000 equity trading balance, FA21 will calculate the number of lots to trade as follows: $10\% \times \$2000 = \200 ; $\$200/\32 per \$1k base unit = 6.25; $6.25 \times \$1k$ per base unit = \$6250; FA21 will Round down to 6 Micro Lots. 6 Micro Lots attracts \$.60 per PIP net result.

To simplify settings, your FXCM account should support Micro or \$1k base units. View margin requirements as set by FXCM at <http://www.fxcm.com/forex-margin-rollover-leverage.jsp>.

Risk Disclosure: The settings shown here are not recommendations or representations that by using the settings will result in profit or losses. The settings represent most recently used settings in a demo account. Your results may be different. Trading foreign exchange on margin carries a high level of risk, and may not be suitable for all investors. The high degree of leverage can work against you as well as for you. Before deciding to invest in foreign exchange you should carefully consider your investment objectives, level of experience, and risk appetite. The possibility exists that you could sustain a loss of some or all of your initial investment and therefore you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with foreign exchange trading, and seek advice from an independent financial advisor if you have any doubts
